MIAMI, FL—Professional Wireless Systems (professionalwireless.com) provided RF mics, IFB and communications for the red carpet and live primetime broadcast of “Ninemond’s” second annual Premios Tu Mundo awards show from the American Airlines Arena in Miami for the second year in a row.

Studer Sells in Europe
Studer Sells in Europe
REGENSBOG, SWITZERLAND—Studer (harman.com) made several recent sales in Europe, including a Vista 1 console for use on RTL4’s daily Koffiepop (Coffee Time) show and a Vista 2 for broadcast facilities provider A1K, both in the Netherlands, plus an upgrade of an Ofrim 3000 at TV2’s Oslo, Norway studio.

By Steve Harvey
NORTHridge, CA—A little over two years after launching its U.S. truck-based Studer Vista digital console broadcast user training and technical certification program, Harman has now introduced an online version of the program. The interactive Studer-Broadcast Academy (SBA) course was developed in collaboration with the Conservatory of Recording Arts and Sciences (CRAS)—which will launch its new broadcast curriculum beginning October 28—but is a stand-alone program accessible to anyone from anywhere in the world.

CRAS has installed a Studer Vista 9, a Compact Remote portable control surface and a Compact Stagebox in the newly built-out Studio E Broadcast Center at its Gilbert, AZ satellite campus. In addition, the conservatory has outfitted a mobile production trailer with a Vista 5, Compact Remote and Stagebox, which will operate out of its main Tempe, AZ campus.

“One of the contingencies when they were doing their shopping was to find a manufacturer who would work with them on supporting their education system,” reports Katy Templeman-Holmes, U.S. marketing, Soundcraft Studer. No other manufacturer was willing or able to step up to the plate and take on a project of this magnitude, she says.

The addition of a broadcast component to the CRAS Master Recording Program II will extend the course from 30 to 36 weeks on-campus.

STATE OF THE INDUSTRY: POST/BROADCAST
(continued from page 1)
(continued from page 3)

“In 10 to 15 years from now, who’s to say it won’t be just one hub—a production operation where picture, sound and mixing are all taking place in one centralized area?”

Tom McCarthy, executive vice president, Sony Pictures Post Production

merical work, but as suggested by its seven TV mix stages, three Dolby-approved stages and ADR stage, its focus is television: 75 percent reality TV and 25 percent episodic TV and features. Happily, Governor Mario Cuomo signed some tax incentives this year—a 30 percent refundable tax credit if 75 percent of the post is handled in New York City; 35 percent if it’s state—those are bringing in plenty of the $40M-and-under productions, says Tom McCarthy, executive vice president, Sony Pictures Post Production. The facility handles Sony projects, but also plenty of third-party work, and has seen a recent upswing in TV post.

“Filmmakers are looking at new ways to lower costs, while still providing quality high-dollar sound on the screen. That puts us in a position of needing to be extremely flexible in workloads, and thinking out of the box,” says McCarthy.

At Producers, an audio and video production and post production facility catering servicing advertising agencies, corporate clients and, thanks to its location in Baltimore, MD, government agencies, turnaround times are faster and the three audio rooms are expected to be more productive.

“We’re doing a lot more things in less time,” says Bob Bragg, senior sound designer/mixer.

Federal legislation has increased the workload slightly: “In December of last year the CALEM Act went into effect. We saw that coming and got the necessary plug-ins to accommodate that monitoring and metering,” says Bragg.

Producers features two rooms equipped with three-year-old Fairlight Constellation systems, each also running Avid Pro Tools 10 rigs for file transfer and compatibility checks. Earlier this year, Bragg helped sound designer/mixer Tim St. Clair bring a third room online with a Thunderbolt-enabled Pro Tools Native system running a Blackmagic video card with an Avid Artist controller.
Studer, CRAS
(continued from page 33)

“Studer, CRAS is a platform called Moodle, which is sort of like Java Script—open source.”

The certification program is not proprietary. “Let’s say Full Sail wanted to integrate this; there is nothing stopping them using it and including it in their curriculum.” But there can only be one co-branded program, according to the agreement, she says, so there will not be any alternate versions of the course.

The online SBA is aimed squarely at a core constituency of current and prospective Vista users. Templeman-Holmes explains: “We’re serving the guys that are already out there, the people that are looking to buy consoles and we’re taking care of the engineers who are having to work on them or are going to be starting their careers working on them.”

The course comprises a series of modules; successful completion of all eight is mandatory in order to receive certification. There is a test at the end of each module and a 90 percent or better score is required for each lesson to be marked complete. Each participant must pass a final exam of 100 questions to earn certification.

“If you pass that final exam, then you get a unique registration number,” she says. Everybody who passes can elect whether or not they are then listed on the Studer web site.

Anyone taking the course must first register then download Virtual Vista software, which provides a graphic representation of a Vista console. The software can also be used for offline console configuration and online remote control of Vista mixing consoles.

“You can take the lessons in any order you like; they are written sequentially but there’s nothing stopping you doing whichever one takes your fancy,” says Templeman-Holmes. “This also allows pro users to jump in anywhere and brush up on aspects of the Vista with which they may not be familiar prior to, or even during, a show.”

Users can download manuals, there is a glossary of terms and there are video segments. “It’s like being in a classroom. We also have examples in some of the lessons from industry professionals where it puts things into context. You can watch full-length tutorial videos completely separate from the rest of the curriculum. We also have a Studer tour that gives you some background.”

The SBA course is attractive to Studer console owners who have a pool of engineers working on them, she comments. “One of our customers, for example, is a large rental house. The owner wanted to spe-

level of information, which we can supply. It allowed him to gauge who is going to be the best guy on the team to send out on a gig.”

The SBA is a useful tool for prospective clients, she said: “It’s a great way to learn a little about the console if you’re in the shopping period, particularly in broadcast were the buying cycle can be so long. It puts them at a level of education that allows them to make a much better decision.”
